

The world's first hands-free, automated microarray instrument

Introducing the first microarray instrument that does your hands-on work for you. With a hybridization oven, fluidics station, and imaging device in one automated instrument, you'll spend less time acquiring data and have more time for science.

Advantages of the GeneTitan™ Instrument:

- Automates microarray processing from end to end
- Condenses seven hours of hands-on time to 30 minutes
- Ideal for medium- and high-throughput applications
- Provides substantial imaging throughput—less than four minutes per array
- Creates flexible workflows and sample registration using Affymetrix® GeneChip® Command Console® (AGCC) software
- Minimizes IT support for low cost of ownership
